Presented By SP Solutions

# Engineered to automate **complex business** processes at scale.

eEDGEVANTAGE Built on the Java 17 technology stack and architected by our founder, Jehan Bastians, the platform has powered more than 500 automated workflows for blue-chip enterprises across Sri Lanka.

## Purpose-Built for Complex, **High-Value** Workflows

eEDGEVANTAGE was designed to support mature business verticals that demand precision, compliance, and operational efficiency. The platform includes a powerful workflow engine with native document management capabilities and has been deployed across:

**Banking & Insurance**  
Client onboarding,  
KYC workflows,  
multi-stage approvals,  
compliance routing.

**Credit Underwriting**  
Automated DSCR  
calculations, risk  
ratings, scorecards, and  
intelligent work  
allocation using our  
Round Robin logic.

**Procurement**  
Structured approval  
flows, vendor  
management, and  
audit-ready  
documentation.

**Insurance Claims**  
Multi-party workflow  
coordination,  
document capture,  
and claims processing  
automation.

## Enterprise-Grade **Integration** Capabilities

Every solution delivered by SP Solutions from our inception in 2006 tight upto 2020 was built on eEDGEVANTAGE, enabling our team to develop deep expertise in:

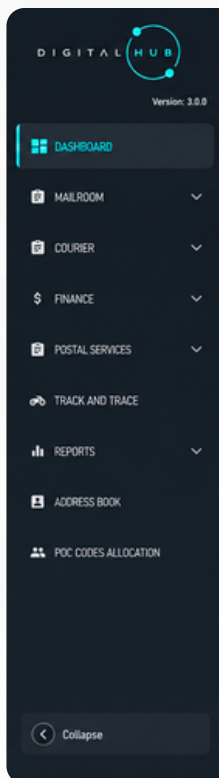

**Systems integration**

**Connecting to core banking systems, insurance platforms, and ERPs**

**Managing full lifecycle delivery – deployment, support, patching, and continuous improvement**

\*And many more...

**TRUSTED BY INDUSTRY LEADERS**

Over the years, our engineering teams have mastered the operational discipline required to maintain mission-critical systems for blue-chip clients, ensuring reliability and measurable value in daily operations.

#### Platform Evolution

After seven major iterations, Edgevantage reached its final stable release in 2023. We have since transitioned new customer solutions to our next-generation platform, while continuing to support existing clients who remain on Edgevantage.

The platform still delivers strong operational value. However, its architecture originally aligned to the 2014 technology landscape limits its ability to support modern, AI-driven, future-proof enterprise solutions.
